

OneDrive works. Dropbox works for creatives.

Let's see which works better for you.

Marketing and media, academics and architects, sales crews and construction companies—creative teams like these count on content collaboration, constant communication, and the ability to quickly share and comment on massive files in hundreds of formats.

And while OneDrive works for document storage and small-file sharing, creatives trust Dropbox for the simple storage and sharing features that help them do their best. So they can focus on the work—not trying to make things work.

You can all work together, no matter what you're working on.

These days, it seems like everyone's working in a different location with different tools. And when you're all trying to work on the same large file at the same time, things don't often work how you'd like.

But with Dropbox's world-class syncing technology, you can quickly and easily preview, manage and deliver complex files of any type, from anywhere, on any device. It doesn't matter what system or software you're on—or if your vendors and customers are working on different platforms altogether—you'll all work together in Dropbox.

Dropbox can sync file uploads as large as 2TB—even massive CAD files and 4K video. OneDrive, on the other hand, is limited to 250GB. Creators who work with rich media (and large files) need space to start a project; share, review, edit and comment on the content; and deliver the final product to the client all in one place. That place is Dropbox.

"Before choosing Dropbox, we checked out the competition: Microsoft OneDrive. But it lacked the scalability we needed. Dropbox never runs out of space."

—2B Living

Work without space limitations.
 Work without file or feedback frustrations.
 Work from anywhere without anything holding you back.

Storage and sync	Dropbox	OneDrive
Desktop file size upload limit	2 TB	250 GB

Sync small changes to files	Yes	Yes
Simultaneous upload / download for large files	Yes	No
Accelerated sync over local network	Yes	No
Viewing and project collaboration		
Large file previews	Up to 150 GB*	Up to 100 GB. Does not support professional video codecs
Metadata search	Yes*	No
File Recovery	180 Days	93 Days (Microsoft 365)
Branded file transfer (up to 250 GB)	Yes*	No
Frame-based commenting for video	Yes*	No
Time-based commenting for video and audio	Yes	No
Natively integrated e-signature	HelloSign	No
Deep Adobe integration		
File transfer within Photoshop	Yes	No
Preview and comment on Adobe files (PSD, EPS, AI, and more) without license	Yes	Can't preview EPS
Native integration with Premier Rush	Yes	No

[*Available with the Creative Tools Add-on](#)

It's intellectual property, but it still requires security

OneDrive users often turn to niche tools like [WeTransfer](#), [Frame.io](#) and others to fill in the gap—leaving IT in the dark as to what's happening or how to protect it. These makeshift measures might get the job done, but they're missing the security, control, and visibility that an enterprise-grade tool like Dropbox offers. And with Dropbox, you can easily manage access within Azure AD.

Dropbox + Microsoft: Better together.

You don't have to choose between tools, and neither do your teams. Dropbox integrates across the Microsoft suite of products, so everyone can work the way they want—within Office 365 and across other Microsoft-based workflows.
